

TRI ORIGIN EXPLORATION

Generating Gold and Base Metal Discoveries in the Canadian Shield

TRI ORIGIN is a mineral exploration company focused on the discovery of gold and base metal deposits in the Canadian Shield. It has substantial depth of experience in the mining industry. Management has a strong track record in the discovery and development of major Canadian gold mines. Projects are strategically located at major mining districts and are drill-ready.

PROJECT HIGHLIGHTS

NORTH ABITIBI

Gold zones drill-ready at deep targets outlined along strike from the Casa Berardi Mine. Surface sampling and shallow drilling has returned high-grade values.

SKY LAKE

Gold deposits partially delineated during the 1950's in the Pickle Lake Gold District are open at depth and targeted for drilling.

DETOUR WEST

Airborne surveying indicates district-scale potential along trend and contiguous with Detour Gold Corp's Detour Lake Gold Mine.

SOUTH ABITIBI

Drilling to commence at geophysical targets in the Cobalt-Temagami District through a fully-funded alliance with Sumitomo Metal Mining Canada Ltd.

J Peng, Marrelli Support Services.
Chief Financial Officer

F Kendle, BSc.
Sr Contract Geologist

Canadian Shield Gold & Base Metal Projects

Sky Lake (gold)

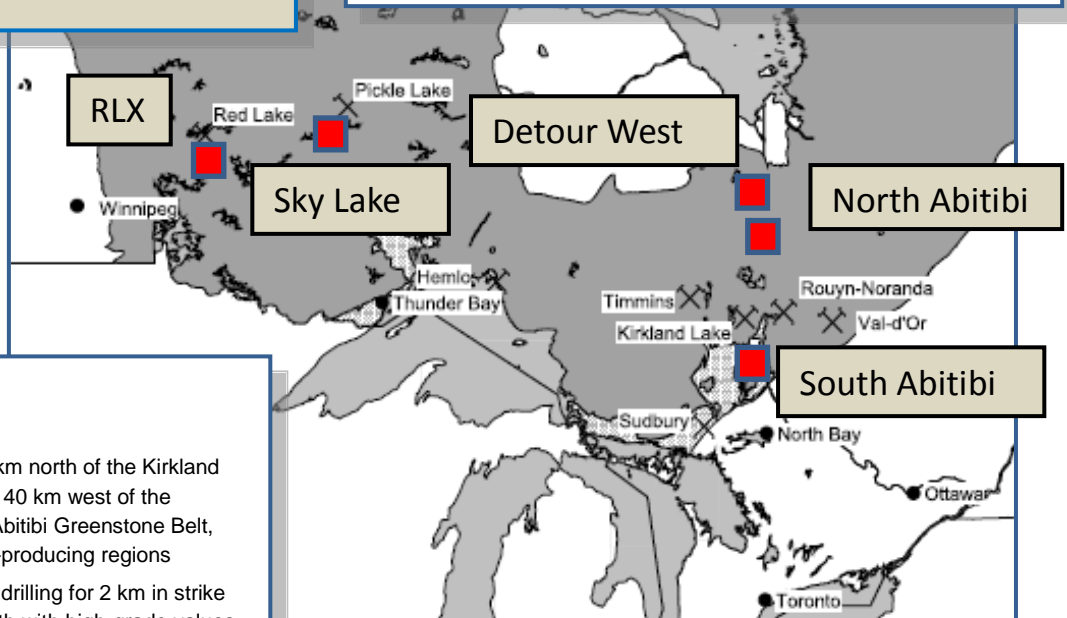

- A 44 km² property located 30 km southwest of the Pickle Lake Gold District with 6 past-producing mines in the belt
- Gold deposits discovered and partially delineated in the 1950's on patent claims optioned from Barrick Gold are targeted for drilling
- New gold occurrences identified by Tri Origin in iron formation & pyritic schists east & west of deposits also indicate potential for discovery

Gold deposits partially delineated on newly acquired patent claims!

Detour West (gold)

- A 15 km long property located 180 km north of the Timmins Gold District contiguous with Detour Gold Corp's Mine property- host to Canada's largest gold reserve at 15.5 million ounces
- Previously unexplored as earlier maps incorrectly indicated that this overburden covered area was underlain by granites and gneisses
- Geophysical surveying by Tri Origin has identified the westward extension of the gold-bearing Detour Lake structures across the property

Contiguous to Detour Gold Mine property with previously unrecognized camp-scale discovery potential!

North Abitibi (gold)

- This 78 km² property is located 150 km north of the Kirkland Lake and Timmins Gold Districts and 40 km west of the producing Casa Berardi Mine in the Abitibi Greenstone Belt, one of the world's most prolific metal-producing regions
- Gold zones have been delineated by drilling for 2 km in strike length but only drilled to 150m in depth with high-grade values returned from surface sampling
- Deep geophysical targeting has outlined strong responses below known gold zones and are drill ready

Drilling planned to evaluate gold zones at depth for their economic potential!

South Abitibi (gold & base metals)

- 50/50 Alliance between Sumitomo Metal Mining Canada Ltd, the funding partner & Tri Origin the operator
- The unexplored southern margin of the Abitibi Greenstone Belt where covered by younger rocks was identified by Tri Origin as prospective for discovery of world-class gold & base metal deposits
- Gold occurrences in Proterozoic & Archean "Abitibi" rocks are being delineated & investigated by drilling

Fully-funded opportunity for discovery using modern technology in accessible terrain with existing infrastructure!
