MARCH 20, 2001**

## **TRI ORIGIN COMMENCES DRILLING AT WAWA PROJECT IN ONTARIO**

**Tri Origin Exploration Ltd. (TOE:CDNX)** has commenced a diamond-drilling program at its optioned Wawa project at Wawa, Ontario. The Wawa property comprises 172 claims totalling approximately 24 square kilometres (5796 acres) located at the western extension of the Abitibi Greenstone Belt. It is situated in one of northern Ontario's first discovered gold camps and is host to seven historical mines that have produced over 120,000 ounces of gold at an average grade of 0.26 ounces of gold per short ton (8.9 grams per tonne). In addition, Tri Origin identified kimberlite, a rock type that has the potential to host diamonds, during last year's exploration program on the property.

Drill targets have been selected based on the positive results obtained from a recently completed exploration program, which consisted of 40 line kilometres of detailed magnetic and Induced Polarization geophysical surveying. This current phase of work will consist of at least 600 metres of core drilling in holes designed to test for both diamond-bearing kimberlite and gold.

The re-interpretation of previous data and detection of new, buried targets through Tri Origin's application of modern exploration techniques in this historic mining area has resulted in recognition of promising exploration targets. Management is optimistic about the opportunity for success presented by these targets. Drill results will be reported following the completion of the program, which is anticipated to be early April.

Tri Origin has an option to earn a 51% interest in the Wawa property from Citadel Gold Mines Inc. and Citabar Limited Partnership by spending \$1.5 million on exploration over five years.
