# Nipissing Cobalt Overview

- The Nipissing Cobalt project is located near the southern margin of the Abitibi Greenstone Belt, 10 km west of the Cobalt Mining District
- The property consists of 51 staked mining claims covering an area of approximately 10,624 hectares
- Cobalt was a world-class silver producing district and acquired its name due to the abundant cobalt associated with the silver (copper, nickel, arsenic) mineralization throughout the area
- During the many decades of silver production cobalt was not a sought after commodity
- The region around the Cobalt Mining District was extensively explored for silver during the early and mid-1900's
- Many of the silver (copper, nickel, arsenic) occurrences discovered were not analysed for cobalt
- The Nipissing Cobalt property contains a number of these occurrences which need a fresh, new evaluation using modern techniques
