

# TRI ORIGIN EXPLORATION

Generating Gold and Base Metal Discoveries in the Canadian Shield

**TRI ORIGIN is a mineral exploration company focused on the discovery of gold and base metal deposits in the Canadian Shield. It has substantial depth of experience in the mining industry. Management has a strong track record in the discovery and development of major Canadian gold mines. Projects are strategically located at major mining districts and are drill-ready.**

## KEY PROJECTS

### **NORTH ABITIBI**

**Eastward continuation of the Casa Berardi gold belt- 6 past-producing mines in Quebec. Gold zones have been delineated for over 2 km by shallow drilling. Deeper targets are drill-ready to test their economic significance.**

### **SKY LAKE**

**Gold deposits partially delineated during the 1950's in the Pickle Lake Gold District are open at depth and targeted for resource delineation drilling.**

## COBALT AREA PROJECTS

### **SOUTH ABITIBI**

**Large landholding in the Cobalt-Temagami District with numerous gold, copper, nickel and cobalt occurrences identified for drill targeting.**

### **NIPISSING COBALT**

**Cobalt occurrences only 10 km from the Cobalt Mining District are within an extensive, underexplored property. Exploration funded through a 3<sup>rd</sup> party option agreement.**

## TOE: TSX-V

### STOCK DATA

Share Price:	\$ 0.02
Shares Outstanding:	119.4 million
Fully Diluted:	127 million
12 month low/high:	\$ 0.01/0.04
Market Cap:	\$ 2.5 million
(at March 1, 2019)	

## DIRECTORS & MANAGEMENT

**Robert Valliant, Ph. D.**  
*CEO & Director*

**JP Janson**  
*Director*

**Alan G Galley, Ph.D.**  
*Director*

**J Peng, Marrelli Support Services.**  
*Chief Financial Officer*

**M Ruhl, BSc.**  
*Geologist*

### Advisors:

**W Holter-** financial

**J Blackwell-** technical

**G Nolan-** corporate responsibility

# Canadian Shield Gold & Base Metal Projects

## Sky Lake (gold)

- A 128 km<sup>2</sup> property located 30 km southwest of the Pickle Lake Gold District, northwest Ontario
- 6 past-producing mines in the belt
- Gold deposits discovered and partially delineated in the 1950's on patent claims optioned from Barrick Gold
- Deposits are open along strike and at depth and are targeted for drilling
- New gold occurrences identified by Tri Origin in iron formation & pyritic schists east & west of the deposits indicate potential for camp-scale discoveries

**Gold deposits partially delineated on patent claims require drilling for resource delineation!**

## North Abitibi (gold)

- A 50 km<sup>2</sup> property located 150 km north of the Kirkland Lake and Timmins Gold Districts and 40 km west of the producing Casa Berardi Mine in the Abitibi Greenstone Belt, one of the world's most prolific metal-producing regions
- In Quebec the Casa Berardi trend hosts 6 past-producing mines. In Ontario, previous work was hindered by poor access
- Gold zones have now been delineated by drilling for 2 km in strike length but only drilled to 150m in depth with high-grade values returned from surface sampling
- Deep geophysics has outlined strong responses below known gold zones and targets are drill ready

**Drilling planned to evaluate gold zones at depth for their economic potential!**

## South Abitibi (gold & base metals, cobalt)

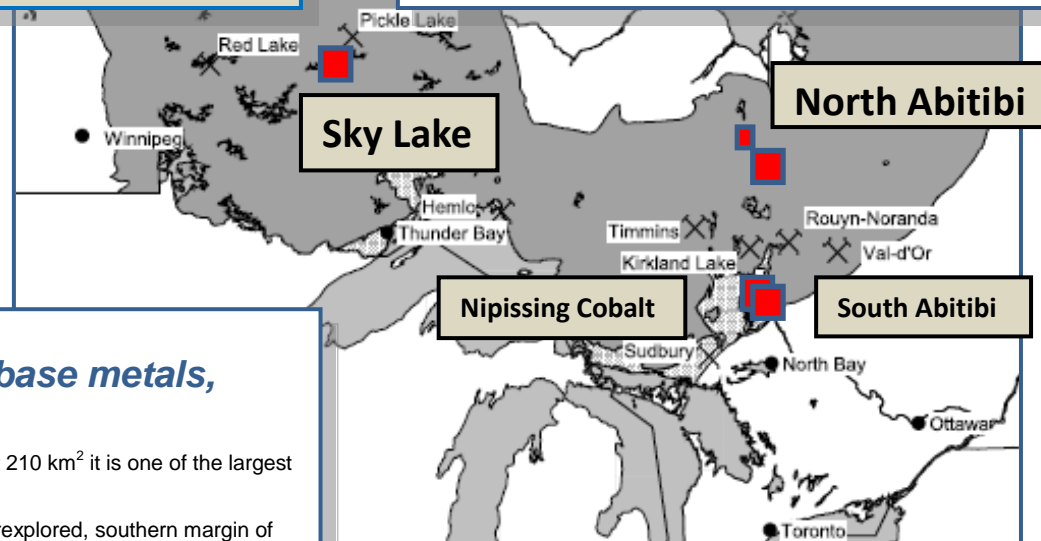

- Located 15 km southwest of Cobalt- at 210 km<sup>2</sup> it is one of the largest landholdings in the Cobalt District
- South Abitibi is underlain by the underexplored, southern margin of the Abitibi Greenstone Belt which is mostly covered by younger Proterozoic-age sedimentary rocks & Nipissing diabase
- The covered Abitibi is targeted for a new gold/base metal district of the "Bousquet/LaRonde type"
- The Proterozoic is targeted for Cobalt-type cobalt/silver deposits
- Tri Origin has prioritized gold, copper & nickel occurrences which occur throughout the property for continued exploration & drilling
- Cobalt (silver, copper) occurrences are recorded from historic work and require field examination

**New opportunity for discoveries using modern technology in accessible terrain with existing infrastructure!**

## Nipissing Cobalt (cobalt)

- A 225 km<sup>2</sup> property only 10 km west of Cobalt, Ontario
- The property is underlain by the westward extension of the geologic environment which hosts the world-class Cobalt Mining District
- Known cobalt occurrences in Proterozoic sedimentary rock and Nipissing diabase have not been explored for over 60 years
- Tri Origin has completed airborne & ground geophysical surveying & preliminary drilling
- Recently, MetalsTech Ltd agreed to option the property from Tri Origin for cash payments, share issuances & work commitments
- MetalsTech completed an initial drill program in 2018 and other first year commitments have been met. The 2<sup>nd</sup> year renewal is June 2019

**Prime location in cobalt country with exploration funded through option agreement!**
